

SUMMARY

Backend Engineer who enjoys building things end to end and thinking from the user's perspective. Experienced in Java Spring Boot microservices, RESTful APIs, and Azure cloud deployments. Comfortable working across the full stack from database design and API development to CI/CD automation and backend integrations across different domains.

WORK EXPERIENCE

Backend Developer, Techmile (Insuremile)

Jan 2026 – Present

- Executing end-to-end migration of a Java microservice from JDK 8 to JDK 17, independently resolving Spring Boot dependency conflicts, API incompatibilities, and production-level integration issues across the upgrade lifecycle
- Developing a Python-based sales automation service that auto-generates daily reports and delivers scheduled insights to the sales team via automated API pipelines
- Enhancing an internal employee-facing Android application by redesigning the UI and integrating backend APIs, improving usability and operational functionality across company-wide workflows
- Integrating Azure Cosmos DB as a NoSQL document store into the backend microservices architecture, enabling schema-flexible data management for high-throughput service requirements
- Configuring API Gateway routing and service-to-service communication across distributed microservices, enabling reliable end-to-end workflow orchestration

Software Engineer, Ignite3i

Nov 2024 – Jan 2026

- Designed and implemented a binary logcode decoding system for network tower fault detection, parsing binary encoded tower transmission data, matching decoded outputs against fault manuals to identify root-cause errors, and updating the fault management system with findings
- Built 10+ RESTful API endpoints for internal sales tooling workflows across a 5-service microservices architecture, reducing manual effort for the sales team
- Delivered backend development across a complete end-to-end insurance platform spanning the full policy lifecycle: quote, proposal, KYC, payment, payment verification, and policy download
- Executed backend runtime modernization across 5 services from legacy to current Spring Boot ecosystem, handling Maven dependency upgrades, API compatibility fixes, and cross-service integration changes
- Engineered request/response pipeline between API gateway and downstream internal services, ensuring reliable end-to-end data flow across the distributed system
- Migrated database from Supabase to Azure SQL, redesigning schema and optimizing indexes to reduce query latency

PROJECTS

Phishing URL Detection Through Multi-Signal Aggregation

- Engineered a multi-signal phishing detection pipeline processing 1.3M URLs, combining lexical features, WHOIS metadata, SSL validation, and threat intelligence sources
- Trained and evaluated LightGBM and Random Forest classifiers achieving 97% ROC-AUC, benchmarked across Precision, Recall, and F1 metrics
- Built a FastAPI backend service for real-time URL risk scoring, delivering inference in approximately 300ms, suitable for browser or gateway-level integration
- Designed modular feature extraction architecture decoupling signal sources from the model layer, enabling independent updates to each component

Learn with AR – an augmented reality-based learning platform

- Secured funding from the Karnataka State Council for Science and Technology (KSCST) for project development and deployment
- Sole developer of an Android-based AR learning application built with Unity 3D and ARCore, delivering interactive 3D visualization across 8+ subject models spanning anatomy, astronomy, and mechanical systems
- Implemented markerless AR rendering enabling real-world overlay of 3D objects without physical markers
- Integrated Blender-designed 3D assets into a modular Unity scene architecture, allowing new subject models to be added without restructuring existing scenes
- Optimized mobile rendering pipeline and UI navigation for stable performance on mid-range Android devices

TECHNICAL SKILLS

Backend:	Java, Spring Boot, REST APIs, Microservices Architecture, JWT Authentication, OOP, Maven
Cloud & DevOps:	Azure App Service, GitHub Actions (CI/CD)
Databases:	Azure SQL, Azure Cosmos DB, PostgreSQL, Supabase, NoSQL
Languages:	Python, C
Mobile:	Android Development
ML & Data:	FastAPI, LightGBM, Random Forest, scikit-learn
Tools:	Git, Linux, Postman

CERTIFICATIONS

- Java Full Stack Web Development - *Tap Academy*
- Software Testing - *NPTEL*
- Foundations: Data, Data, Everywhere - *Coursera*

ACTIVITIES

- Developed and launched an Android application for Tec-Hunt at DEXTERIX, achieving a 60% participation rate across the college
- Published 2 research papers in peer-reviewed journals on phishing detection systems

EDUCATION

University of Visvesvaraya College of Engineering, Karnataka, India Master of Technology (MTech) in Computer Science, CGPA: 8.58	2024 – 2026
Atria Institute of Technology, Karnataka, India Bachelor of Engineering in Computer Science and Engineering, CGPA: 7.42	2019 – 2023
